

Phase 1 Extracted Content

Extracted from: KUN_Arabia_Enterprise_Technical_Master_Plan_Edition_v2

3.1 Phase 1 — Bagisto Blade Theme (Launch: Brand Foundation)

3.1.1 Information Architecture (IA) & Page Map (MVP)

Public pages

- Home (editorial/curation blocks)
- Country Landing Page (e.g., Yemen / Morocco / etc.)
- Cultural Category Page (e.g., “Traditional textiles”, “Handmade jewelry”)
- Search Results Page (SRP) with facets
- Product Detail Page (PDP)
- Vendor Storefront:
 - Vendor Profile (story + authenticity + policies)
 - Vendor Catalog
- Cart
- Checkout
- Order Confirmation
- Content pages:
 - Authenticity Policy
 - Shipping & Returns
 - About KUN Arabian
 - FAQ

Vendor pages

- Vendor onboarding steps (profile, documents, store settings)
- Vendor dashboard (orders, products, payouts view, analytics lite)

Admin pages

- Content blocks management (home/country/category content)
- Vendor authenticity flags & moderation workflow

Acceptance criteria

- Every page type has an SEO strategy + performance budget + analytics instrumentation.
-

3.1.2 Design System & UI Foundation

Approach: create a lightweight design system even in Blade to prevent inconsistent UI.

Design tokens (must be defined centrally)

- Typography scale (H1–H6, body, small, button)
- Spacing scale (4/8/12/16/24/32...)
- Border radius scale
- Elevation/shadows scale
- Brand color palette + semantic colors (success/warn/error)

Reusable components (MVP)

- Header/navigation + mobile menu
- Footer (country links, policies)
- Card system (product card, vendor card, story card)
- Buttons (primary/secondary/ghost)
- Form components (input/select/checkbox/radio)
- Price display component (supports discount)
- Badge system (authenticity badge, “Made in X”, “Verified Vendor”, “Handmade”)
- Pagination/infinite scroll pattern (choose one per page type)

Implementation guidance

- Use Blade components (`resources/views/components/*`) for consistent UI.
 - Keep Vue usage limited to dynamic widgets in Phase 1 (filters, cart mini-widget, variant selection).
-

3.1.3 Storytelling Modules (Vertical Differentiation)

Modules (Phase 1)

- Vendor Story Panel (origin, craft story, region)
- Craft/Material Highlights (structured attributes)
- Authenticity Indicators (policy-driven, not decorative):
 - Verified vendor badge
 - “Origin verified” / “Handmade” tags
 - Return policy label
 - Vendor rating/quality (if available)
- Country & Culture Section (content blocks controlled by admin)

Data requirements

- Vendor metadata fields:
 - Origin country/region

- Story (short/long)
 - Production method tags
 - Authenticity evidence (optional in MVP)
 - Product metadata fields:
 - Cultural category taxonomy fields
 - Country of origin
 - Material tags
 - Handmade/limited-run flags
-

3.1.4 SEO Specification (Phase 1)

SEO requirements per page type

- Home: optimized title/meta; structured content blocks
- Country pages: canonical URL, indexable, unique content blocks
- Category pages: canonical URL, indexable, unique intro text
- PDP: schema.org Product + Offer + Breadcrumb
- Vendor page: schema.org Organization + Breadcrumb (where applicable)

Technical SEO

- Canonicals and pagination tags for SRP/category pages
- Robots rules for:
 - internal search queries (avoid index bloat)
 - filter combinations (allow only curated ones)
- Sitemap strategy:
 - products sitemap (chunked)
 - vendor sitemap
 - country/category sitemap

Acceptance criteria

- Each page type has defined:
 - title template
 - meta description template
 - H1 rule
 - schema type
 - canonical rule
-

3.1.5 Performance Budgets & Frontend Engineering Standards (Phase 1)

Core Web Vitals targets (initial)

- LCP: target threshold defined, measured on mobile

- CLS: near-zero target
- INP: target threshold defined

Engineering rules

- Images:
 - WebP/AVIF if available
 - responsive sizes
 - lazy load below the fold
- CSS:
 - avoid large global CSS
 - purge/optimize Tailwind build
- JS:
 - restrict Vue usage to necessary widgets
 - defer non-critical scripts

Release gates

- Lighthouse score thresholds for top pages
 - “No new blocking scripts” rule without approval
 - Performance regression checks in CI (at least synthetic test baseline)
-

3.1.6 Analytics & Tracking (Phase 1)

Minimum event plan

- Product impression (optional if needed)
- Product click
- Add to cart
- Checkout start
- Payment success/failure
- Order completed
- Search query + applied facets
- Vendor page view
- Country page view

Instrumentation approach

- Data layer spec (even without GTM initially):
 - standard event names
 - required fields (product_id, vendor_id, category, country, price, currency)

Acceptance criteria

- Analytics events map to the KPI dashboards described in the Data & Analytics section.

12.1 Months 1–2 — Launch & Financial Integrity (G1 + G2)

Outcomes for Month 2

- Production-ready MVP with **brand theme, vendor onboarding, order flow, commission+ledger posting, basic fraud controls, CI/CD, and baseline observability.**
 - Capability target: **1,000 daily orders** with stable performance and zero ledger drift.
-

Workstream 1 — Platform Foundation & Architecture

Deliverables

- Repository structure standardized:
 - /packages/kun/commission
 - /packages/kun/ledger
 - /packages/kun/payouts
 - /packages/kun/scoring
 - /packages/kun/fraud
 - /packages/kun/search
 - /packages/kun/analytics
 - /packages/kun/notifications
- Architecture decisions recorded (ADR):
 - event-driven monolith approach
 - idempotency policy
 - ledger model and reconciliation rules
 - upgrade policy for Bagisto/plugin

Acceptance criteria

- Each package has: service provider, migrations, config, tests scaffold, clear interfaces.
- No proprietary logic in Bagisto core or the marketplace plugin.

Dependencies

- None (foundation).
-

Workstream 2 — Commerce & Marketplace (Bagisto + Extension)

Deliverables

- Marketplace extension configured and stabilized:
 - vendor registration + vendor dashboard UX
 - vendor product management (CRUD)

- order splitting enabled and validated
- Checkout flow finalized:
 - order states mapped (created → paid → fulfilled → refunded/cancelled)

Acceptance criteria

- Vendor can list products and receive split orders.
- Order lifecycle events are emitted reliably.

Dependencies

- Foundation package architecture.
-

Workstream 3 — Financial Platform (Commission + Ledger + Payouts)

Deliverables

- Ledger system v1:
 - ledger_accounts
 - ledger_entries (immutable)
 - idempotent ledger posting API (idempotency keys)
 - ledger audit log entries for admin actions
- Commission engine v1:
 - rule resolution (vendor → tier → category → global)
 - produces deterministic commission record per order item
 - posts ledger entries on `PaymentCaptured`
- Reconciliation job v1:
 - daily reconciliation report
 - mismatch alert (ledger vs order/refund totals)
- Payout scheduler v1:
 - payout delay window (T+X)
 - payout eligibility checks (no freeze, compliant, scoring threshold)
 - batching model defined (weekly/bi-weekly)

Acceptance criteria

- For any order, finance can answer:
 - what commission rule was applied and why
 - what ledger entries were posted
 - what payout is owed and when it becomes payable
- **Zero drift** on day-level reconciliation in staging datasets.

Dependencies

- Order events and stable payment captured state.
-

Workstream 4 — Trust & Safety (Fraud + Enforcement)

Deliverables

- Fraud monitoring v1:
 - cancellation/refund ratio alerts
 - late fulfillment metric
 - abnormal order spike threshold alerts
- Enforcement actions v1:
 - payout freeze mechanism
 - manual review flag
 - vendor restriction (limited features)

Acceptance criteria

- Fraud signal triggers freeze correctly and is auditable.
- Admin can review and release freeze with audit log.

Dependencies

- Ledger + payout module.
-

Workstream 5 — Frontend Branding & UX

Deliverables

- Theme system:
 - typography + design tokens
 - layout and component kit
 - country landing pages
 - vendor storytelling pages
 - authenticity badges framework
- Performance budgets defined:
 - LCP, CLS, INP targets
 - image optimization pipeline (CDN or server-based)

Acceptance criteria

- Lighthouse baseline documented.
- Primary pages meet agreed load time target on staging.

Dependencies

- Basic catalog + vendor pages.
-

Workstream 6 — DevOps & Release Engineering (G2)

Deliverables

- CI/CD baseline:
 - composer install via lock
 - Node build using pinned Node LTS
 - Vite build artifact verification
 - staging deployment on merge
 - production deployment gating
- Environments:
 - dev/staging/prod parity
 - secrets management policy
- Monitoring baseline:
 - error logging + request latency tracking
 - queue depth + queue latency tracking
 - DB health metrics and slow query logging

Acceptance criteria

- Any deployment can be rolled back within minutes.
- Staging mirrors production topology (at smaller scale).

Dependencies

- None (can run parallel).
-
